DETAILED ACTION

Allowable Subject Matter

1. Claims 1-16 are allowed.

Regarding Claim 1, Haartsen does not teach scanning a frequency band of the cellular network with said mobile communication means for determining signal levels within the frequency bands, wherein said step of scanning comprises the sub-step of:

Measuring reception levels at frequencies within the frequency band; and

Space averaging the measured reception levels; and

Receiving a selection of an operating frequency for the base station from the user of said mobile communication means.

Regarding Claim 7, Haartsen does not teach a mobile station comprising:

Processing means to receive measurements of reception levels at frequencies within a frequency band of the cellular telecommunications, wherein said measurements are space averaged to determine an average reception level for a frequency, and

Processing means to transmit configuration information for the base station to the cellular telecommunications network.

Regarding Claim 11, Haartsen does not teach selecting, by a user using the mobile station, an operation frequency for the base station, by performing the sub-steps of:

moving the mobile station around in order to take a plurality of measurements of reception levels at different spots within the transmission area of the base station;

Art Unit: 2682

averaging together the measured reception levels to obtain an average reception level for each frequency in the selected frequency band, and selecting, based at least on the averaged reception levels, an operation frequency for the base station from the frequencies with the selected frequency bands; and

transmitting the selected operation frequency to the base station, whereby the operation frequency of the base station is configured.
